Personal Profile

Currently a student of Makers academy, studying Data Engineering whilst working as a WordPress developer for a few small-scale clients. Hard working with excellent problem-solving skills, strong observational/ collaborative skills, and quick hands-on learner, these skills have allowed me to pursue private projects both by myself and within a small team but have led me longing to develop a more substantial career in Data engineering. Previous experience in management roles has led to well-developed teamwork skills and good communicator habits, keen to help others in both work and community projects. Also, developing my ai interaction skills and a weekend greengrocer at Barnet market since 2007, which has led to great client facing communication skills and a fond, kind-hearted attitude to community interaction.

Experience

Proof Of Treasure – Private project
January 2022 – Present

- **https://proofoftreasure.com**
